Question:

For the given matrix

$$\mathbf{Q} = \begin{pmatrix} \frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \\ 0 & 1 & 0 \\ -\frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \end{pmatrix},$$

which of the following statements is/are true?

- | | |
|---|---------------------------------------|
| 1) $\mathbf{Q}$ is an orthogonal matrix | 3) $\mathbf{Q}$ is a singular matrix |
| 2) $\mathbf{Q}^T = \mathbf{Q}^{-1}$ | 4) $\mathbf{Q}$ is a symmetric matrix |

Solution:

$$\mathbf{Q}^T = \begin{pmatrix} \frac{1}{\sqrt{2}} & 0 & -\frac{1}{\sqrt{2}} \\ 0 & 1 & 0 \\ \frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \end{pmatrix} \quad (4.1)$$

$$\mathbf{Q}^T \mathbf{Q} = \begin{pmatrix} \frac{1}{\sqrt{2}} & 0 & -\frac{1}{\sqrt{2}} \\ 0 & 1 & 0 \\ \frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \end{pmatrix} \begin{pmatrix} \frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \\ 0 & 1 & 0 \\ -\frac{1}{\sqrt{2}} & 0 & \frac{1}{\sqrt{2}} \end{pmatrix} \quad (4.2)$$

$$\mathbf{Q}^T \mathbf{Q} = \begin{pmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix} = \mathbf{I} \quad (4.3)$$

$$\det(\mathbf{Q}) = 1 \neq 0 \quad (4.4)$$

Also,

$$\mathbf{Q}^T \neq \mathbf{Q} \quad (4.5)$$

Thereby, $\mathbf{Q}$ is an orthogonal matrix i.e. $\mathbf{Q}^T = \mathbf{Q}^{-1}$
